Abstract.- The Heteroceridae (Coleoptera) specimens that were collected from Turkey by various researchers in various museums and private collections have been evaluated. The first precise locality data of 7 Heteroceridae species were given from Turkey with this study (*Augyles flavidus* (P. Rossi, 1794), *Augyles hispidulus* (Kiesenwetter, 1843), *Augyles maritimus* (Guérin-Méneville, 1844), *Augyles marmota* (Kiesenwetter, 1850), *Augyles turanicus* (Reitter, 1887), *Heterocerus fossor* Kiesenwetter, 1843, *Heterocerus holosericeus* Rosenhauer, 1856). And also new locality data belongs to 5 Heteroceridae species were presented (*Augyles pruinosus* (Kiesenwetter, 1851), *Heterocerus fenestratus* (Thunberg, 1784), *Heterocerus flexuosus* Stephens, 1828, *Heterocerus fusculus* Kiesenwetter, 1843, *Heterocerus obsoletus* Curtis, 1828). This study is the first checklist about Heterocerids from Turkey.

Key words: Heteroceridae, Coleoptera, mud-loving beetles.

INTRODUCTION

Heteroceridae or variegated mud-loving beetles are widespread, occurring on every continent except Antarctica (King and Lago, 2012). Ninety five species belong to three genera (*Augyles* Schiödte, 1866; *Heterocerus* Fabricius, 1792; *Micilus* Mulsant and Rey, 1872) are known from The Palaearctic Region (Mascagni, 2006). *Augyles pruinosus* (Kiesenwetter, 1851), *Heterocerus fenestratus* (Thunberg, 1784), *Heterocerus fossor* Kiesenwetter, 1843 and *Heterocerus holosericeus* Rosenhauer, 1856 were reported first from Turkey by Mascagni (1991), while *Heterocerus flexuosus* Stephens, 1828 and *Heterocerus obsoletus* Curtis, 1828 were reported from Turkey by Mascagni and Giardini (2005).

This study is the first checklist about Heterocerids from Turkey. A total of 286 specimen belonging to 13 Heteroceridae species were listed from Turkey. Distributional maps of Heteroceridae of Turkey are presented in Figures 1 and 2. The purpose of this study is to give first precise locality data of 7 Heteroceridae species that were not published until today. It also contains new collecting data of 5 Heteroceridae spp.

MATERIALS AND METHODS

The specimens were collected from different freshwater habitats of Turkey with sieves having 3,15×1 mm mesh size. The beetles were killed with ethyl alcohol (96%) and stored in small bottles until identification. Specimens were cleaned with brush before identification. Aedeagophore of collected specimens were dissected under a stereo microscope in the laboratory. The studying materials are deposited in the following museums and private collections; CEZ, Coll. E. Ezer, Zlin, Czech Republic; CMS, Coll. A. Mascagni, Scandicci (Firenze), Italy; CSU, Coll. S. Skalický, Ustín ad Orlicí, Czech Republic; CTA, Coll. G. E. Taşar, Adiyaman, Turkey; CVZ, Coll. J. Vávra, Zlin, Czech Republic; MCNV, Museo Civico di Storia Naturale di Venezia, Italy; MHNG, Muséum d'Histoire Naturelle, Genève, Switzerland; MSNB, Museo di Scienze Naturali "E. Caffi", Bergamo, Italy; MSNG, Museo Civico di Storia Naturale "G. Doria", Genova, Italy; MSNV, Museo Civico di Storia Naturale di Verona, Italy; MZUR, Museo di Zoologia dell'Università di Roma, Italy; NME, Naturkundemuseum Erfurt, Germany; NMW, Naturhistorisches Museum Wien, Austria; and SMNS, Swedish Museum of Natural History, Stockholm, Sweden;

RESULTS

Order Coleoptera Linnaeus, 1758

Superfamily Byrrhoidea Latreille, 1804
 Family Heteroceridae MacLeay, 1825
 Genus AUGYLES Schiödte, 1866

1. *Augyles flavidus* (P. Rossi, 1794)

Synonyms

Heterocerus albipennis Kuwert, 1890;
Heterocerus campestris Motschulsky, 1854;
Heterocerus flavescens Schaufuss, 1861;
Heterocerus minimus Kiesenwetter, 1843;
Heterocerus minutes Kiesenwetter, 1835;
Heterocerus pallescens Schaufuss, 1861

Material examined

Antalya: Alanya, Türkler, 05.IV.1996, leg. A. Kopetz, 2 ex. (NME); 05.IV.1996, leg. A. Weigel, 1 ex. (NME); Erzurum: Pazaryolu, 01.VI.1989, leg. Schöumann and Schillhammer, Jäch, 10 ex. (NMW); Mardin: 30.V.1987, leg. M. Jäch, 1 ex. (NMW); Şırnak: Cizre, 30.V.1987, leg. Schöumann and Schillhammer, 1 ex. (NMW).

Remark

These localities were given for the first time from Turkey.

Chorotype

Centralasiatic-Europeo-Mediterranean.

2. *Augyles hispidulus* (Kiesenwetter, 1843)

Material examined

Çanakkale: Ezine, 17.V.1991, leg. Schöumann and Schillhammer, 1 ex. (NMW); Edirne: (date is not clear).VI.1894, leg. Flach, 1 ex. (CSU).

Remark

These localities were given for the first time from Turkey.

Chorotype

Turano-European.

3. *Augyles maritimus* (Guérin-Méneville, 1844)

Synonyms

Heterocerus basalis Mamitz, 1929;
Heterocerus britannicus Kuwert, 1890; *Heterocerus*

burchanensis Schneider, 1896; *Heterocerus nanus* Gene, 1836

Material examined

Erzurum: 01.VI.1989, leg. M. Jäch, 2 ex. (NMW), Olur, 09.VI.1989, leg. Schöumann and Schillhammer, 1 ex. (NMW).

Remark

These localities were given for the first time from Turkey.

Chorotype

European.

4. *Augyles marmota* (Kiesenwetter, 1850)

Synonyms

Heterocerus funebris Schaufuss, 1863;
Heterocerus maritimus Kuwert, 1890; *Heterocerus unicolor* Dufour, 1851

Material examined

Çankırı: Çerkeş, (date is not clear).VIII.1987, leg. Werner, 1 ex. (NMW); Kayseri: İncesu, 16.VIII.1980, leg. Bianchi, Moretti and Valle, 2 ex. (MSNB).

Remark

These localities were given for the first time from Turkey.

Chorotype

Centralasiatic-Europeo-Mediterranean.

5. *Augyles oblitteratus* (Kiesenwetter, 1843)

Distribution in Turkey

There is no detailed locality data from Turkey (Mascagni, 2006, 2014).

Chorotype

Centralasiatic-European.

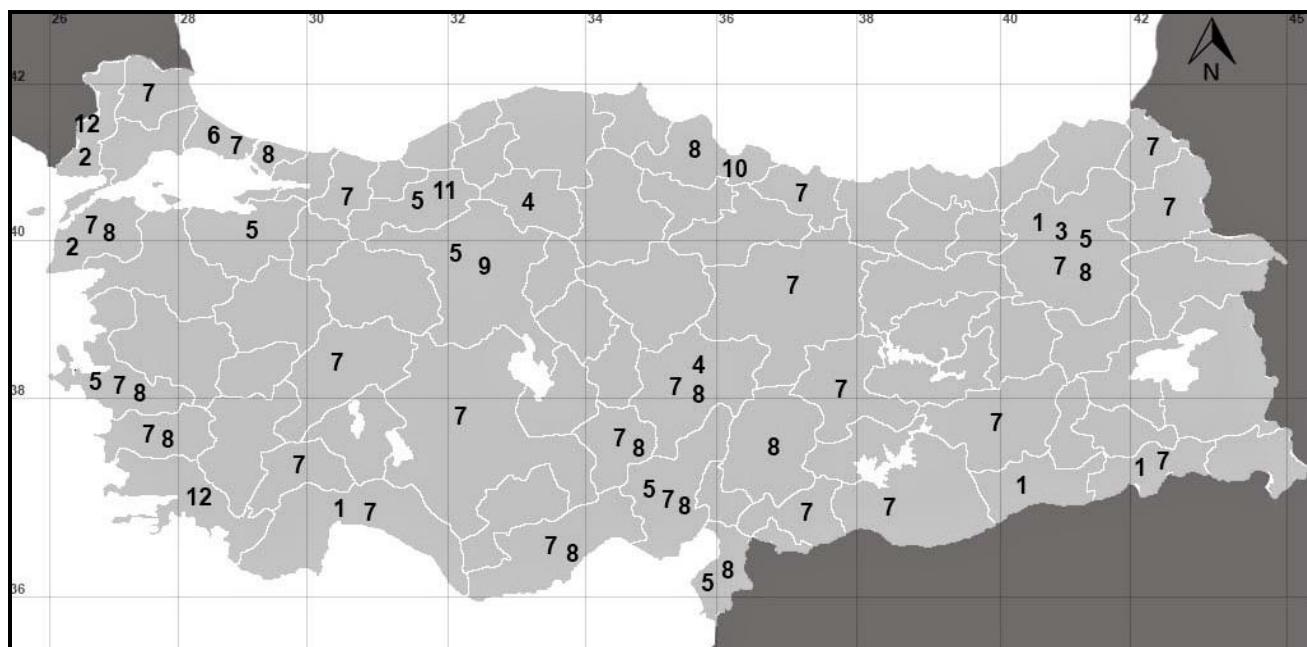

6. *Augyles pruinosus* (Kiesenwetter, 1851)

Material examined

Adana: Yumurtalık, Deveciuşağı, 25.V.1993, leg. Šárovec, 1 ex. (CSU); Ankara: 28.V.1961, leg.

(MHNG); Kahramanmaraş: leg. Petrovitz and Ressi, 1 ex. (NMW); Kayseri: İncesu, 16.VIII.1980, leg. Bianchi, Moretti and Valle, 38 ex. (MSNB); Mersin: Silifke, 1990, leg. Schödl, 1 ex. (NMW); Niğde: 1250 m., leg. Petrovitz and Ressi, 8 ex. (NMW);

Samsun: Terme, 27.V.1989, leg. M. Jäch, 4 ex. (NMW).

Distribution in Turkey

Kahramanmaraş (Mascagni and Giardini, 2005).

Chorotype

Palaearctic.

3. *Heterocerus fossor* Kiesenwetter, 1843

Synonyms

Heterocerus bifasciatus Küster, 1849; *Heterocerus cincticollis* Rey, 1890; *Heterocerus rectus* G. W. Waterhouse, 1859

Material examined

Ankara: 28.V.1961, leg. G. Cadamuro, 1 ex. (MCNV).

Remark

This locality was given for the first time from Turkey.

Chorotype

Asiatic-European.

4. *Heterocerus fusculus* Kiesenwetter, 1843

Synonyms

Heterocerus oblongulus Kuwert, 1890; *Heterocerus opacus* Rey, 1890; *Heterocerus pulchellus* Kuwert, 1890; *Heterocerus similis* Kuwert, 1890

Material examined

Samsun: Çarşamba, 27.V.1989, leg. M. Jäch, 1 ex. (NMW).

Remark

This locality was given for the first time from Turkey.

Chorotype

Asiatic-European.

5. *Heterocerus holosericeus* Rosenhauer, 1856

Synonyms

Heterocerus fluviatilis A. Fiori, 1906;

Heterocerus lineatus Kuwert, 1890; *Heterocerus panormitanus* Kuwert, 1890; *Heterocerus pustulatus* Schilsky, 1890; *Heterocerus pustulatus* Schilsky 1892; *Heterocerus ragusae* Kuwert, 1890; *Heterocerus subfossor* A. Fiori, 1906; *Heterocerus villiger* A. Fiori, 1906

Material examined

Turkey, E. Ratti, 1 ex. (MCNV); Bolu: Lake Abant, 26.V.1967, leg. Aspöck and Radda, 1 ex. (NMW).

Distribution in Turkey

There is no detailed locality data from Turkey (Mascagni, 1991, Mascagni and Giardini, 2005).

Chorotype

Mediterranean.

6. *Heterocerus obsoletus* Curtis, 1828

Synonyms

Heterocerus quadrimaculatus Hochhuth, 1873

Material examined

Edirne: İpsala, 20.VIII.1967, leg. V. Sbordoni, 1 ex. (MZUR); Muğla: Fethiye, Dodurga, leg. Petrovitz, Ressi, 1 ex. (NMW).

Distribution in Turkey

Edirne (Mascagni and Giardini, 2005).

Chorotype

Asiatic-European.

DISCUSSION

The Heterocerids are poorly known from Turkey. There are a limited number of studies. The precise locality data of six Heteroceridae species have been given from Turkey by only two studies (Mascagni, 1991, Mascagni and Giardini, 2005) until now. In this checklist, 13 Heteroceridae species were listed from Turkey. The first precise locality data of seven Heteroceridae species that were not published until today, were given (*Augyles flavidus* (P. Rossi, 1794), *Augyles hispidulus*

(Kiesenwetter, 1843), *Augyles maritimus* (Guérin-Méneville, 1844), *Augyles marmota* (Kiesenwetter, 1850), *Augyles turanicus* (Reitter, 1887), *Heterocerus fossor* Kiesenwetter, 1843, *Heterocerus holosericeus* Rosenhauer, 1856). And new distributional data belongs to five Heteroceridae species were added (*Augyles pruinosis* (Kiesenwetter, 1851), *Heterocerus fenestratus* (Thunberg, 1784), *Heterocerus flexuosus* Stephens, 1828, *Heterocerus fusculus* Kiesenwetter, 1843, *Heterocerus obsoletus* Curtis, 1828). With this checklist, Turkish Heteroceridae fauna is better known. But more studies are needed to know the whole distributional data.

ACKNOWLEDGEMENTS

Authors would sincerely thanks to collectors of Heteroceridae specimens: Argano, Aspock, Besuchet, Bianchi, Burckhardt, Cadamuro, Colonnelli, Dellacasa, Flach, Giordani Soika, Jäch, Kopetz, Leiler, Löbl, Moretti, Perissinotto, Petrovitz, Pretzmann, Radda, Ressi, Sacco, Sama, Šárovec, Sbordoni, Schillhammer, Schödl, Schöumann, Skoupy, Valle, Vanata, Vávra, Weigel, Werner.
