Abstract.- The composition of the scarab beetle fauna of Pakistan is virtually unknown and what is known is largely based on older taxonomic works and historic records. Recent sampling in Pakistan has revealed the presence of several species of Scarabaeinae previously unknown, and we include distributional and temporal data for ten species and two subspecies. The following species are believed to be new country records for Pakistan: *Copris fricator* (Fabricius 1787), *Gymnopleurus cyaneus* (Fabricius 1798), *Paragymnopleurus sinuatus* ssp. *assamensis* (Waterhouse 1890), *Garreta dejeanii* (Laporte 1840), *Garreta mundus* (Wiedemann 1819), *Onitis excavatus* Arrow 1931, *O. lama* Lansberge 1875, *O. punctatostriatus* Janssens 1937, *O. singhalensis* Lansberge, *O. virens* Lansberge 1875, *Sisyphus longipes* (Olivier 1789) and *Sisyphus crispatus* ssp. *hirtus* Wiedemann 1823.

Key Words: Scarabaeidae, Scarabaeinae, dung beetles.

INTRODUCTION

The Scarabaeidae fauna in Pakistan is poorly known. The first, perhaps only, serious attempt at cataloguing and describing Scarabaeidae beetles for this part of the world was Gilbert Arrow's three volumes on Lamellicornia in the series *The Fauna of British India* (Arrow, 1931), but this work was preliminary and is now outdated. Since then there have been five catalogues that cover the region, the first two being part of the last and most recent treaties the *Catalogue of Palaearctic Coleoptera* (Löbl and Smetana, 2006), in which (I.c., 2006:8) it is stated "The Palaearctic Region, as it is defined for the purpose of this Catalogue, includes some areas that are usually considered to the Afrotopical, Oriental, and Pacific Regions respectively, i.e. the south of the Arabian Peninsula and Suqutra, all of Pakistan. The Himalayan part of India including Arunachal Pradesh, Bhutan, and Nepal, the south of China, and the Pacific Island of Japan." There are also series of non-coprophagous scarab beetles publications from Pakistan (Abdullah and Roohi, 1968, 1969; Keith, 2003, 2004, 2005a,b, 2006, 2007a,b,c, 2010a,b; Keith and Sabatinelli, 2010; Keith and Saltin, 2012; Ratcliff and Ahmed, 2010). Siddiqui and

Kamaluddin (2011) provided the first inventory for the distribution of *Onthophagus* Latreille, 1802 of Pakistan including some new records of Pakistan. However, some inventory of new species, revisional work and distributional notes on Scarabaeinae from Iran (Kabakov, 2006; Ziani, 2006; Kabakov, 2008; Mowlavi *et al.*, 2008; Ziani and Gharakhloo, 2010) are published; but there have never been a contribution dedicated exclusively to elucidating the biodiversity of the Scarabaeinae of Pakistan. To our knowledge, there is no comprehensive species list of Scarabaeidae for the country. The Catalogue of Palaearctic Coleoptera (Löbl and Smetana, 2006) lists Pakistan for some of the species, but it is again not complete for listing the taxa occurring in Pakistan. We provide here an annotated list of scarabs collected in all possible localities of Pakistan with the hope of adding to the faunal composition of scarabs occurring in Pakistan. Some of these species are recorded from the country for the first time.

MATERIALS AND METHODS

The specimens were collected from different areas of Pakistan by hand picking and through light traps. All these specimens were identified through pertinent literature and respected experts including; Dr. Darren J. Mann, Dr. Stefano Ziani, Dr. Bruce Gill, Dr. Mashahiro Kon, Dr. Teruo Ochi, Dr. Fernando Vaz-De- Mello and Dr. Enrico Barbero.
